

WIRELESS Controller

Model RWCR/RCW-10/20

RFI wireless controller is a factory programmed **temper-proof** unit with a key lock device. It can be installed as a single unit inside the gate operator or two separate units, with the receiver part inside the gate operator and the programmer inside the guard house to monitor incoming traffic. The **RFI wireless controller** can be factory programmed to hold up to 256 different community codes and up to 250 or 500 residents code to match the RFI programmable transmitter. In **three** easy steps, the **RCW-10/20** can be

programmed to add / delete residence codes. If a resident code is deleted, an unauthorized entry will trigger the **audio alarm** and three segments **LED display** will display **unauthorized resident code**. Similarly to all other RFI receivers, **Model RWCR** has shielded amplified circuit to prevent **dc motor noise interference** thus enhancing the **RWCR** range. The RWCR unit operates on 12-24 Volts ac or dc.

RFI wireless Model RWCR	RFI RCW-10/20	Transmitter 310P
Single channel receiver	3 step programming	Single channel
Pre-programmed facility codes	3 segments LED display	Pre programmed from factory
Green LED for power indicator	Temper proof key lock	Red LED for Power indicator
Bright red LED for relay latch	Unauthorized entry audio-alarm and display	12V alkaline battery
N.O. or N.C dry relay contact	Built-in lithium battery back up system	Visor or key chain available in 3 colors
Built in surge protector	12 button key pad	Dim: 2.3x1.5x.45 in.
12-24Vac/12-30Vdc	Dimensions: 6.625x3.25x1.15 in.	
3" Coax cable with antenna		
Dimensions: 5.6x3.25x1.375 in.
